

# **Psychophysical studies of visual object recognition**

Neurobiology 230. Harvard College/GSAS 78454

October 2, 2017

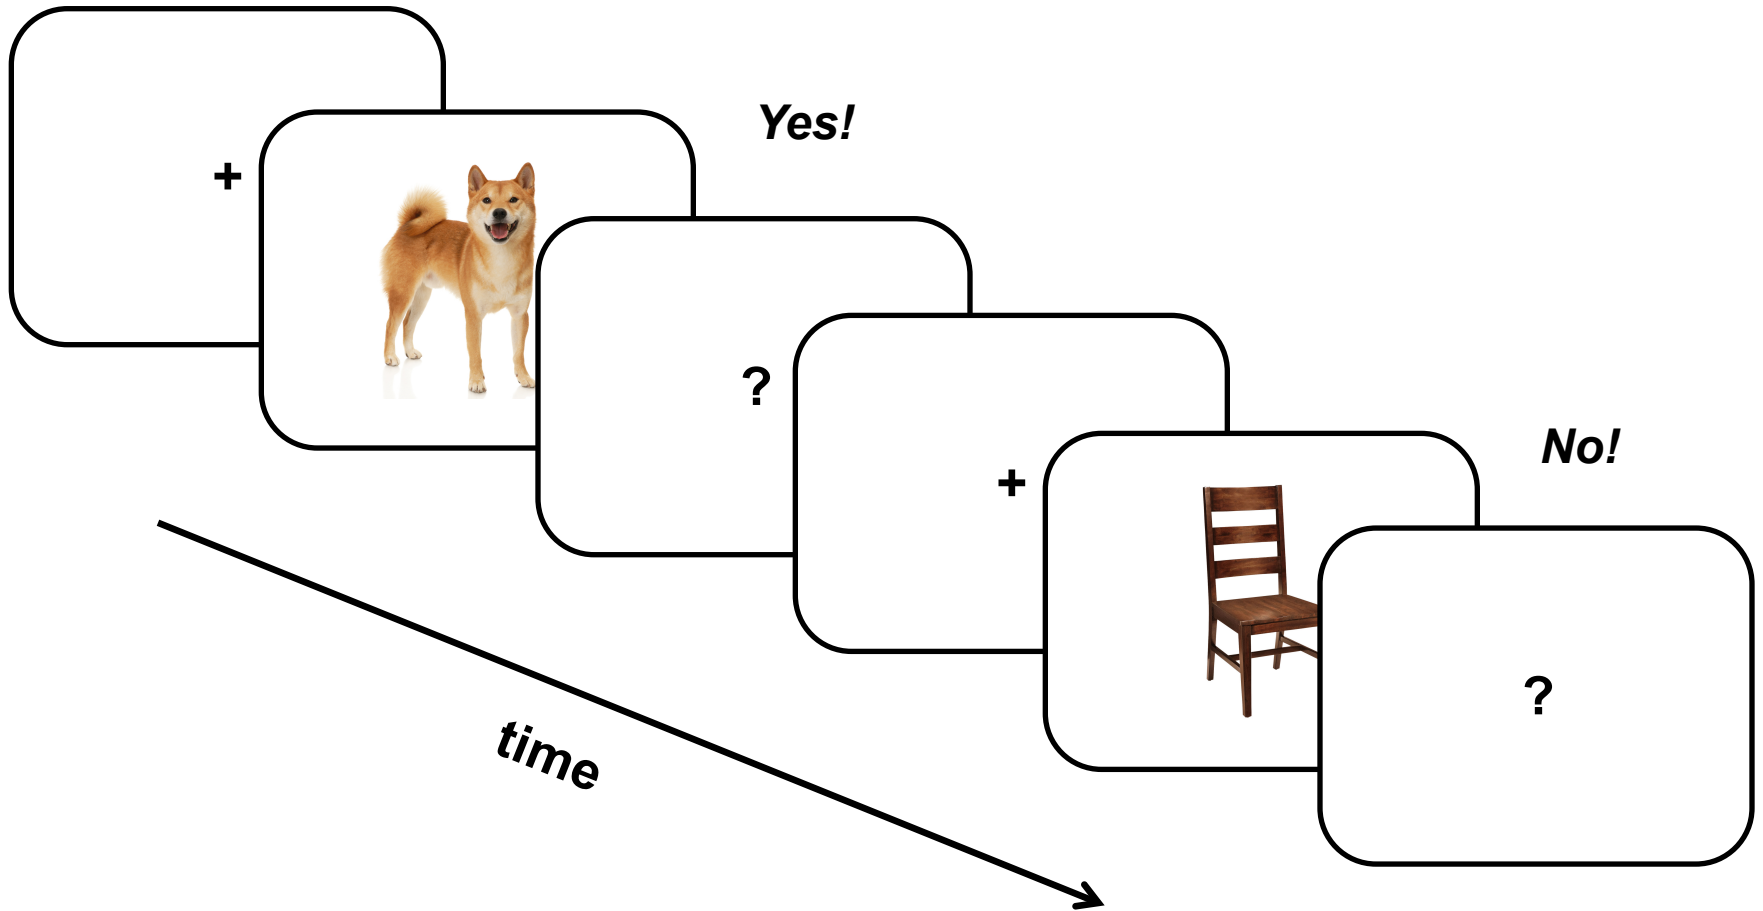

**Jiye Kim**

# What is psychophysics?

**Psychophysics** is the study of the link between stimulus and perception and it quantitatively investigates the relationship between physical stimuli and the perception/sensation/behavior they produce.

# Example psychophysical experiment

Is the object an animate or inanimate object?

# What do typical experiments measure?

**Reaction time:** The time taken by subjects to perform a task or make a judgment. Reaction time can give an indication (or at least the upper bound) or how long the necessary psychological (and neural) processes take.

**Performance:** The accuracy of performing a task. Performance is often inversely related to reaction time.

**Threshold:** Stimuli can be varied (e.g., presentation duration) to determine the threshold for detection or discrimination.

# Gestalt laws

**Law of closure**

**Law of similarity**

**Law of proximity**

**Law of symmetry**

**Law of continuity**

**Law of common fate**

# Law of closure

We perceive objects such as shapes, letters, pictures, etc., as being whole when they are not complete. Specifically, when parts of a whole picture are missing, our perception fills in the visual gap.

# Law of similarity

We group **similar** elements into collective entities or totalities. This similarity might depend on relationships of form, color, size, or brightness

# Law of proximity

We group objects that are **proximate** to each other (either spatially or temporally) tend to be grouped together.

# Law of symmetry

We group elements that are **symmetrical** to each other tend to be perceived as a unified group.

[ ] { } [ ] { }

# Law of continuity

We perceive points that are connected by straight or curving lines are seen in a way that follows the smoothest path.

# Law of common fate

We perceive elements with the same moving direction as a collective unit.

# Hollistic process of face perception

**Part-whole effect**

**Inversion effect**

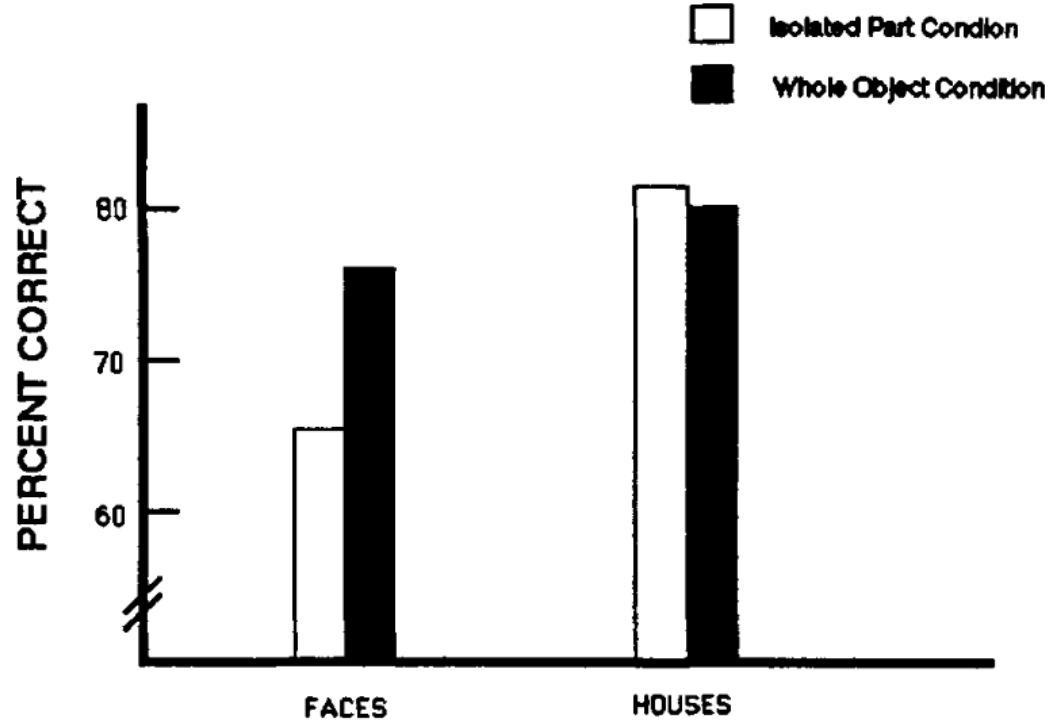

**Composite face effect**
