PostDoc Position in Computational Neuroscience

Applications are invited for a Postdoctoral Position in Computational Neuroscience in the Kreiman lab. We are looking for an innovative and enthusiastic researcher with a strong quantitative background and experience in Neuroscience research. The post-doc will work in a collaborative and strong academic environment within the Children's Hospital Boston, Harvard Medical School scientific community. The research efforts will involve the quantitative study of visual object recognition and learning using computational models and physiology.

Please submit your application including CV with a list of publications and names of three possible referees to:

Gabriel Kreiman
