### **PostDoc Position in Computer Vision and Visual Neuroscience**

Applications are invited for a Postdoctoral Position in Computer Vision and Visual Neuroscience in the Kreiman lab. We are looking for an innovative and enthusiastic researcher with a strong quantitative background (e.g. Math, Physics, Engineering, Computer Science). The research efforts will involve the development and evaluation of biophysically inspired quantitative models of visual recognition. These models will be evaluated using computer vision databases for objects and their transformations. The models will also be compared against human performance and neurophysiological measurements. We are particularly interested in the integration of bottom-up and top-down processes in visual recognition.

To be considered for this position please submit your application including

- CV
- list of publications
- names of three people that are familiar with your work
