

## **Brains, Minds and Machines Summer Course**

The Center for Brains, Minds and Machines ran an intensive [three-week summer course](#) to give advanced students a "deep end" introduction to the problem of intelligence – how the brain produces intelligent behavior and how we may be able to replicate intelligence in machines. The goal of the course, which took place at the Marine Biological Laboratory in Woods Hole, MA, was to help train a new generation of scientists to leverage progress in neuroscience, cognitive science, and computer science.
