## README

You must agree with the terms and conditions specified in this link before downloading any material from the Kreiman lab web site. Downloading any material from the Kreiman Lab web site implies your agreement with this license.

## Citation for this work

Madhavan R, Bansal AK, Madsen JR, Golby AJ, Tierney TS, Eskandar EN, Anderson WS, Kreiman G. Neural Inetractions Underlying Visuomotor Associations in the Human Brain. Cerebral Cortex, In Press.

## Code

Run Figure2_example to plot an example like the one in Figure 2.

## FileInfo.mat [4K]

load FileInfo.mat

| BehaviorFileList | $12 \times 1$ | 4296 | cell |
| :--- | :---: | :---: | :---: |
| Blocks | $12 \times 1$ | 3504 | cell |
| RawDataFile | $12 \times 1$ | 4282 | cell |
| samplingrate | $1 \times 12$ | 96 | double |
| subjects | $12 \times 1$ | 1398 | cell |

## BehaviorFileList

List of files containing behavioral data, cell file of length 12.
There can be more than one entry per subject, when multiple sessions where ran for a given subject.
E.g. BehaviorFileList $\{5\}=\mathrm{p} 5-2011 \_10 \_27-18 \_16 \_48$. mat
which can be found under p5 folder

## Blocks

Block numbers for each subject

## RawDataFile

List of files containing neurophysiological data, cell file of length 12.
There can be more than one entry per subject, when multiple sessions where ran for a given subject
E.g. RawDataFile\{5\}=myst_vr_p5.mat
which can be found under p5 folder

## samplingrate

Sampling rate in Hz for a given subject
Subjects
Subject folder names

## Electrode parcelation files

e.g.
load p5/parcelation_p5.mat
Anatomical parcel information based on Freesurfer automatic parcelation for each subject

| channels | $96 \times 1$ | 768 | double |
| :--- | :---: | ---: | :--- |
| hemisphere | $1 \times 96$ | 768 | double |
| orig_channels | $1 \times 96$ | 768 | double |
| region_codes | $96 \times 1$ | 768 | double |
| regions | $96 \times 1$ | 14114 | cell |
| talairach | $96 \times 3$ | 2304 | double |
| volumeind | $96 \times 3$ | 2304 | double |

channels
Channel number
hemisphere
1 for right hemisphere, 2 for left hemisphere
region_codes
Parcel region number code based on the atlas of Destrieux C, Fischl B, Dale A, Halgren E. 2010. Automatic parcelation of human cortical gyri and sulci using standard anatomical nomenclature. Neuroimage. 53:1-15.

## regions

Abbreviation for each region
volume_ind
3D volume information in subjects native space for electrode location

| Neurophysiological Data |  |  |  |
| :--- | :--- | ---: | :--- |
| e.g. |  |  |  |
| load p5/myst_vr_p5.mat |  |  |  |
|  |  |  |  |
| correct_response | $2 \times 104$ | 1664 | double |
| image_category | $1 \times 104$ | 832 | double |
| ra_data | $104 \times 4001 \times 108$ | 359513856 | double |
| subject_response | $1 \times 104$ | 832 | double |
| va_data | $104 \times 5001 \times 108$ | 449369856 double |  |

image_category
Image presented in each trial

```
subject_response
```

Subject responses
correct_response
Correct responses
ra_data
Data aligned to motor responses
104x4001x108

104 = number of trials
4001 = number of samples (see sampling rate to convert to seconds)
108 = number of recorded channels (note that only the channels under Electrode Locations are relevant)
va_data
Data aligned to visual onset
104x5001x108
$104=$ number of trials
5001 = number of samples (see sampling rate to convert to seconds)
108 = number of recorded channels (note that only the channels under Electrode Locations are relevant)

## Behavioral data

e.g.
load p5/p5-2011_10_27-18_16_48.mat

| block_struct | $1 \times 40$ | 48576 | struct |
| :--- | :--- | :--- | :--- |
| exp_params | $1 \times 1$ | 10756 | struct |
| image_list | $1 \times 126$ | 17442 | cell |

exp_params
Set of experimental parameters. These are only useful to re-run the stimulus presentation paradigm
image_list
Name of each image. The image presented in each trial is coded in image_category, under Neurophysiology data.

```
block_struct
Information about each block. Note that not all 40 blocks are ran. In this case, only
the first }7\mathrm{ blocks were ran, as evidenced by the fact that most fields in
block_struct(8) are empty.
e.g.
block_struct(1)
n_images_in_block: 8
Number of trials in current block
presentations: [1 [ 2 2 2 2 1 1 2 1]
Group for each trial
score: 8
Score
m2sobj: 0
start_time: '18:18:02'
Block start time
reaction_times: [4.8972 2.5445 2.6455 2.1394 2.1355 2.2287 2.0533 1.9890]
Behavioral response times (seconds)
responses: [5 6 6 6 5 5 6 5]
Behavioral responses
correct: [1 1 1 1 1 1 1 1 1 1]
```
